

ANIRUDHA SUTAR

AI Engineer · Agentic AI · RAG · GenAI · Graph Analytics · Python

sutaranirudha604@gmail.com | +91-8018221995 | Pune | [linkedin.com/in/anirudha-sutar](https://www.linkedin.com/in/anirudha-sutar) | github.com/anirudh6370

Professional Summary

AI/ML Engineer with 2.5+ years building agentic AI pipelines, graph-based fraud analytics, RAG systems, and LLM-powered document intelligence for the insurance domain. Hands-on with LangChain, LangGraph, Neo4j Graph Data Science (WCC, Leiden community detection), vector databases, and prompt engineering.

Technical Skills

GenAI & Agents	LangChain, LangGraph, Multi-Agent Orchestration, Prompt Engineering, RAG, LLM Fine-Tuning, Tools, MCP, Claude code
AI/ML	HuggingFace, Transformers, PyTorch, TensorFlow, Scikit-learn, NLTK, OpenCV, CNN, Transfer Learning (VGG16, Xception), BERT/GPT, Ollama
Graph & Data	Neo4j (Graph Data Science – WCC, Leiden), Vector DB (Opensearch/Chromadb/FAISS), Embedding-based Similarity, MySQL, SQL
Cloud & Tools	AWS (EC2, S3, Lambda), Docker, Git, CI/CD, Github Actions
Stack	Python, FastAPI, React.js, Streamlit, REST APIs

Professional Experience

Associate Software Engineer (AI) · Insuremo Pvt Ltd

Apr 2025 – Present

Fraud & Collusion Detection in Claims (POC) – Neo4j GDS, LangGraph, Python, AI Agents

- Modeled claims, claimants, garages, and repair entities as a graph in Neo4j; applied WCC and Leiden community detection to surface collusion networks across ~10K+ synthetic claim records.
- Layered multi-signal fraud detection – narrative-to-damage mismatches, overcharged parts, and invoice inconsistencies – on top of the graph, cutting false-positive manual reviews by an estimated ~30%.
- Orchestrated the end-to-end pipeline using LangGraph-based AI agents, with AI-generated natural-language explanations to make flagged claims interpretable for non-technical reviewers.

MMV Mapping System for Motor Insurance – Fuzzy Matching, RAG, OpenSearch, LLM, Prompt Engineering, Redis

- Built a scalable system to standardize and map vehicle data (Make-Model-Variant) across insurers with inconsistent formats, reducing manual mapping effort by an estimated ~40%.
- Combined fuzzy matching with embedding-based similarity search over an OpenSearch vector DB, using a RAG-style retrieval layer to ground AI model outputs in verified vehicle records across large-scale insurer datasets.
- Applied prompt engineering to guide AI models in semantically interpreting vehicle attributes, improving match accuracy across insurers with configurable strict/relaxed thresholds.

Policy Document Template Generation System – AI Agents, Aspose, Document Parsing & Manipulation, Dynamic Tagging

- Built an AI-agent-driven document intelligence pipeline converting static insurance policy documents into dynamic, tag-based templates, using Aspose for document parsing and manipulation, cutting manual policy-generation effort by an estimated ~30%.
- Implemented dynamic tagging to auto-populate templates from structured policy objects, and used prompt engineering to extract structured fields from unstructured source documents.

AI Engineer · AppNAI

Apr 2024 – Mar 2025

- Developed computer vision applications for the agriculture sector using TensorFlow, scikit-learn, and pretrained models (VGG, Xception) via transfer learning; built a React + FastAPI stack to serve model outputs.
- Collaborated on training and optimizing ML models for agricultural use cases, iterating on accuracy and inference performance.

Key Projects

Alzheimer's Early Diagnosis with Brain MRI Processing

Dec 2023

OpenCV · VGG16 · CNN | [github](https://github.com/anirudh6370/Alzheimer-MRI-detection) · [Alzheimer-MRI-detection](https://github.com/anirudh6370/Alzheimer-MRI-detection)

- Built an early Alzheimer's detection pipeline using VGG16 feature extraction and CNN classification on MRI images, with preprocessing (Gaussian blurring, skull stripping) and augmentation for class imbalance.

Education, Certifications & Achievements

M.Sc. in Data Science · Silicon University, Bhubaneswar

CGPA: 9.33 / 10 · 2022 – 2024

Certifications:

- TensorFlow Python – Great Learning
- Python for Data Analysis – Great Learning
- Achievers Club Member – Silicon University
